

Liongard Solution Overview

Unlock the Power of Attack Surface Management

Liongard offers unified visibility across all IT assets and systems, enabling IT Service Providers & MSPs to automate asset discovery, documentation, misconfiguration detection, and cyber insurance reporting. Efficiently manage cyber resiliency while driving operational efficiency, deep IT visibility, and supporting compliance at scale – **ultimately boosting profitability.**

Asset Discovery & Inventory

Automatically inventory all cyber assets, including identities, devices, software, and data across cloud, on-premises, and endpoints. This unified view ensures MSPs track every component in their clients' environments, providing complete visibility, eliminating blind spots, and reducing security vulnerabilities.

Advanced Automated Documentation

Automate documentation of configurations and changes, maintaining accurate records that enhance cyber resilience. This reduces manual effort, enabling MSPs to quickly identify vulnerabilities, track changes, and align with security best practices.

Configuration Change Detection & Auditing

Audit configurations continuously, detecting changes that deviate from best practices. Detailed alerts and audit trails empower IT Service Providers & MSPs to swiftly identify and remediate, ensuring compliance with security standards.

Real-Time Monitoring & Remediation

Real-time monitoring gives MSPs instant user visibility, ensuring accurate inventory and compliance. Automated detection enables remediation, reduces security risks, cuts manual effort, and enables holistic Attack Surface Management.

Liongard is a game changer. Its ability to give us actionable insights across our IT stack has not only improved our efficiency but also helped us secure our customers in a way that wasn't possible before.
